Denka and DuPont: EPA Region 6 RA sends letter responding to Hugh Lambert's air monitoring concerns

On January 27, 2020, Regional Administrator McQueen responded to a letter from attorney and community activist, Hugh Lambert, who expressed concerns about EPA's pending transition from an air monitoring program based on collecting air samples every 6th day to a continuous monitoring program (SPods) that will only collect and analyze air samples for chloroprene when VOC concentrations exceed a to-be-determined threshold. EPA's letter highlighted the anticipated benefits from the new SPod program, including achieving a better understanding of the frequency and magnitude of chloroprene spikes. EPA further believes that this new program may help identify actions that Denka may be able to take to reduce the occurrence of spikes and thereby further reduce ambient concentrations of chloroprene in the community. EPA sent similar letters to Congressman Richmond on January 15, 2020 and newly elected Parish President Hotard on January 23, 2020. EPA is coordinating with Ms. Hotard, Mr. Richmond, and the Louisiana Department of Environmental Quality to hold a community meeting in February to discuss the new SPod system in greater detail. SPod deployment is currently scheduled to occur the week of February 18, 2020. [REDACTED]
